Food Delivery Funnel Optimization

User Behavior Analysis & A/B Testing

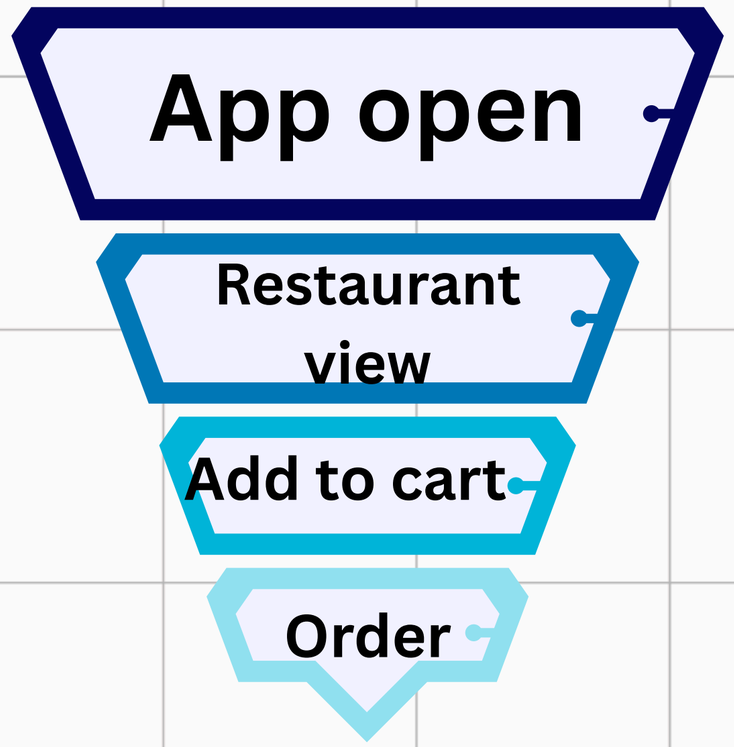
Identifying drop-offs and improving conversions through product thinking

Pranjali Khandare

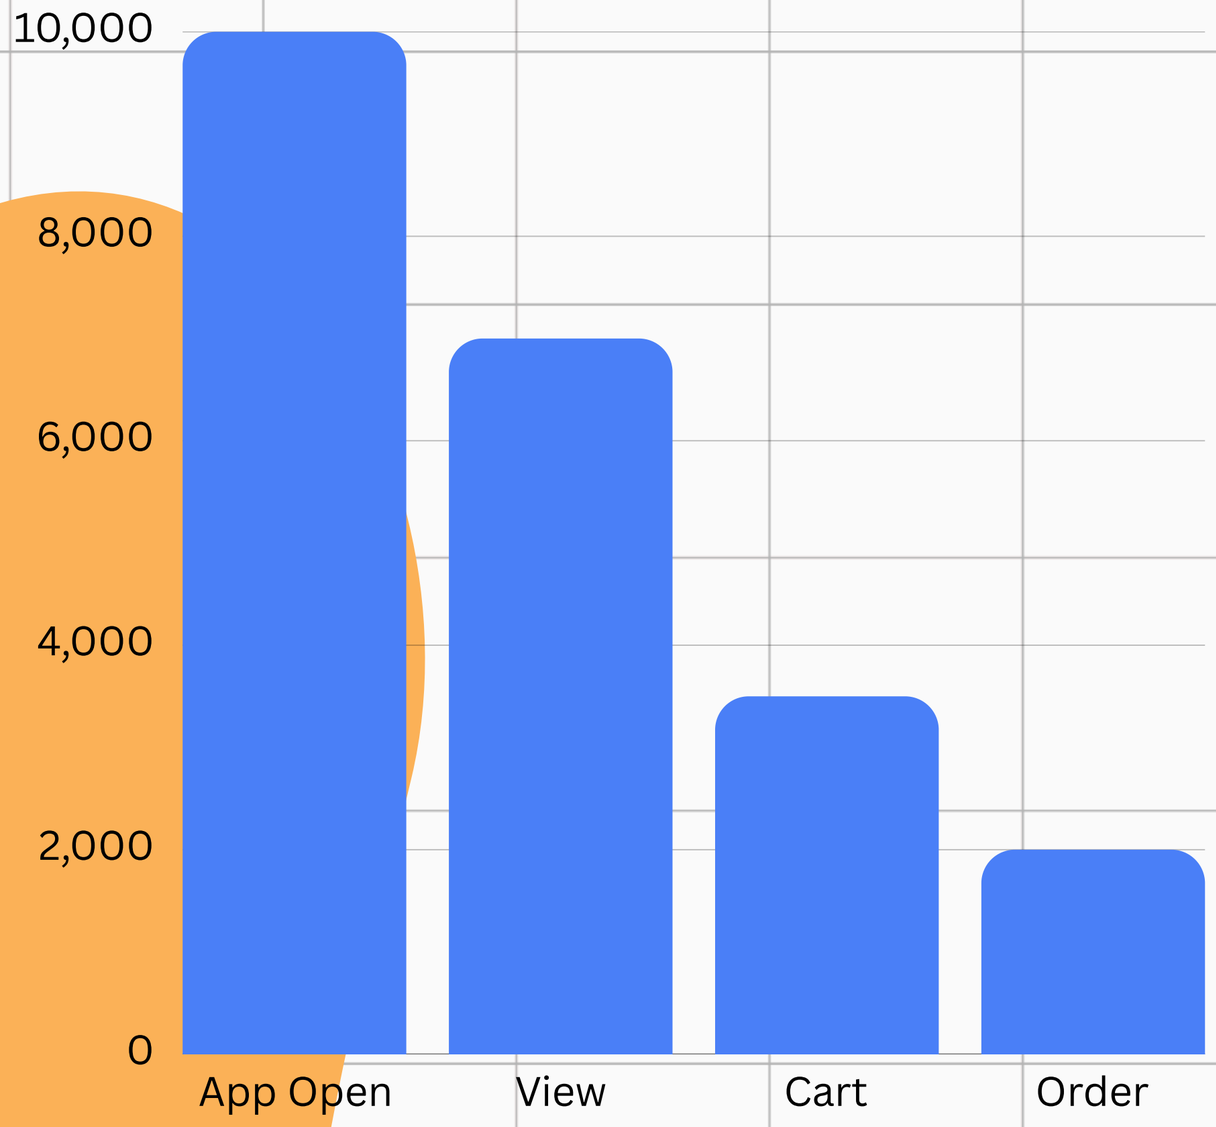
PROBLEM

Users drop off significantly during ordering journey, reducing conversion and revenue potential.

USER FUNNEL



FUNNEL DATA



KEY ANALYSIS

- Open → View: 70%
- View → Cart: 50%
- Cart → Order: 57%

KEY INSIGHT

Users face friction at the decision stage due to:

- Unclear menu
- Pricing perception
- Lack of trust

RECOMMENDATIONS

- Improve menu clarity
- Highlight popular items
- Add ratings/reviews
- Simplify selection

A/B TEST

Version A	Version B
A: 50%	B: 65%↑

BUSINESS IMPACT

- Improved mid-funnel conversion
- Higher order volume without increasing acquisition cost
- Better user decision experience
- No extra marketing cost

This project uses simulated data to demonstrate product thinking & experimentation.
